Profile

Dynamic and results-driven **Java / Full-Stack Developer** with expertise in **Spring Boot, REST APIs, Angular and microservices**. Proven track record in designing and delivering scalable applications, including an **Online Assessment Platform** and a comprehensive **Loyalty Management System (LMS)** with role-based access control, notification workflows, dashboards, customer and transaction management, points allocation and redemption, reporting, and admin settings. Passionate about clean code, performance optimization, and building high-quality, maintainable software solutions.

Skills

- **Languages:** Java, TypeScript, SQL, HTML/CSS
- **Frameworks:** Spring Boot, Spring Data JPA, Spring Security, Angular, Hibernate
- **Data:** PostgreSQL, Kafka, Elasticsearch
- **Architectures & Patterns:** Microservices, CQRS (with Spring Boot and Elastic Search)
- **Tools:** Git, Maven, Docker, Postman, GitHub, Bitbucket Actions, Ubuntu

Experience

Java / Full-Stack Developer | Remote/India

Nov 2024 – Present

- Designed and implemented a **role-based user management system** using **Spring Security, JWT, and dynamic permission handling**.
- Configurable built modules **email and notification** driven by **business rules and role-based triggers**.
- Delivered business workflows for **customer onboarding, point allocation, redemption, reporting, and settings**.
- Developed a full stack **online assessment platform** using **Spring Boot, Angular, PostgreSQL**, supporting test creation, scheduling, and automated results.
- Implemented a real-time **scoring and result engine** with **dashboards, notifications and historical reporting**.
- Designed reusable **Angular components** (tables, modals, dashboards) designed for consistency and maintainability of the user interface.
- Created and optimized **RESTful APIs** using **Spring Boot, Hibernate, Spring Data JPA, Elasticsearch** with global search and pagination.
- Integrated **Apache Kafka** for event-driven microservices with **resilient consumers, retry mechanisms, and async communication**.
- Migrated and optimized databases in **PostgreSQL**, applying **query tuning and indexing** for scalability.
- Containerized backend and frontend services with **Docker**, improving deployments and environment consistency.
- Automated backend builds with a custom **Shell Script (Maven, Git, Docker)**, reducing release time.
- Enhanced monitoring and error handling with **centralized logging and alerts**.
- Conducted **code reviews, mentoring and best practices enforcement** to strengthen team skills.
- Performed **performance profiling and memory optimization**, reducing API response time by **30%**.
- Collaborated with **QA and product owners** for requirements analysis and timely delivery.
- Implemented **role-based dashboards and analytics modules** for data-driven decision making.
- Designed and developed a **Failed Rules Screen** to display rule validation errors and implemented backend logic to capture, process and manage failed rule scenarios.

Projects

Loyalty Management System (LMS – mSparsh)
Tech Stack: Java, Spring Boot, Hibernate, PostgreSQL, Elasticsearch, Kafka, Docker, Angular, HTML, CSS, TypeScript

- Designed and developed a scalable loyalty platform to manage customers, rewards, and redemptions.
- Implemented **role-based user management** with dynamic permission handling and automatic role filtering.
- Built a configurable **notification & email engine** with checkbox-based controls for flexible alerts.
- Added data export functionality for module-specific downloads directly from the server.
- Integrated **Kafka** for event-driven microservices and **Elasticsearch** for advanced search and reporting.
- Containerized backend and frontend services using **Docker** to improve deployment and scalability.
- Delivered a responsive **Angular UI** with dashboards for administrators and customers.

Nov. 2024 – Present

Online Assessment Application
Tech Stack: Spring Boot, Hibernate, PostgreSQL, Angular

- Developed a full-stack assessment platform to streamline test creation, scheduling, and assignment for students and employees.
- Implemented admin features with **role-based access** for managing tests, questions, users, and results.
- Integrated **automated email notifications** to alert users when tests are assigned.
- Designed a **login-based redirection flow**, automatically guiding users to their assigned tests.
- Built a **real-time scoring and result engine**, sending results to candidates, admins and higher authorities.
- Delivered a responsive **Angular frontend** with secure **Spring Boot REST APIs** for reliable backend operations.

Sep 2024 – Nov 2024

Education

- **BSc (PMCs)**, Government Arts and Science Autonomous College, Karwar, KUD
Percentage: **85.78%**2022
- **PUC (PCMB)**, Government Pre-University College, Karwar, DPE
Percentage: **71.83%**2019
- **SSLC**, B G V S Adarsh Vidyalaya, Karwar, KSEEB
Percentage: **87.84%**2017

Certifications

- Certified in **Java Full Stack Development**

Language Skills

English | Hindi | Kannada | Konkani | Marathi

Interpersonal Skills

Teamwork | Interactive | Problem Solver | Quick Learner | Self-Motivator

Keywords (ATS)

Java, Spring Boot, REST API, Microservices, Angular, JPA/Hibernate, PostgreSQL, Kafka, Docker, JWT, Testing, Maven, Git
